Step 9.7: Build the reports

R1: Monthly Commission by Sales Representative

1. **New Report**, type **Orders** (the one named exactly **Orders**), **Start Report**.
2. **Columns:** Order Number, Account Name, Order Date, Effective Amount, Commission Amount.
3. **Group Rows:** add **Order Date** → set **Group Date By = Calendar Month**; then add **Sales Representative**.
4. ▼ on **Commission Amount** → **Summarize → Sum**.
5. **Filters:** Date Field **Order Date**, Range **All Time**. **Add Filter: Status equals Paid.**
6. **Save & Run** as R1 Monthly Commission by Sales Representative in **Blush Reports**.

R2: Quarterly Revenue Statement

1. **New Report → Orders.**
2. **Columns:** Order Number, Order Date, Effective Amount, Total Cost, Gross Profit.
3. **Group Rows: Order Date** → **Group Date By = Fiscal Quarter**; then **Record Type**.
4. Summarize **Sum** on Effective Amount, Total Cost and Gross Profit.
5. **Filters:** Range **All Time**; **Status equals Confirmed, Paid**.
6. Optional: ▼ on "Sum of Effective Amount" → **Edit Column Name**: Revenue (excl. GST).
7. Save as R2 Quarterly Revenue Statement.

R3: Monthly Orders

1. **New Report → Orders.**
2. **Columns:** Order Number, Account Name, Record Type, Status, Sales Representative, Order Date, Total Payable.
3. **Group Rows: Order Date** → **Calendar Month**.
4. Summarize **Sum** on Total Payable.
5. **Filters:** Range **All Time**; **Status equals Confirmed, Paid**.
6. Save as R3 Monthly Orders.

R4: Retail vs Wholesale, with Previous Month

1. **New Report → Orders.**
2. **Columns:** Order Number, Order Date, Record Type, Total Payable.
3. **Group Rows:** first **Record Type**, then **Order Date** → **Calendar Month**.
4. Summarize **Sum** on Total Payable.
5. **Filters:** Range **All Time**; **Status equals Confirmed, Paid**.

6. Click **Save & Run** as R4 Retail vs Wholesale Monthly before adding the formula.
7. **Edit**. In the Outline, click the small ▼ next to **Columns** → **Add Summary Formula**.
    - **Column Name:** Previous Month Total
    - **Format:** Currency, **Decimal Places:** 2
    - **Where will this formula be displayed:** choose the **Order Date** grouping
    - **Formula:** PREVGROUPVAL(then click **Sum of Total Payable** in the field list so the editor inserts its token, then type , and the grouping name for **Order Date** (use the editor's list), then). It should look similar to PREVGROUPVAL(Order.Total_Payable__c:SUM, Order.EffectiveDate). Token names may look slightly different in your org, so use the names the editor inserts.
8. Click **OK**, then **Save & Run**.

What you should see: under each channel, one row per month with **Sum of Total Payable** and **Previous Month Total**, which is the row above. The oldest month shows 0 or blank. If the formula is rejected, send me the error message. The report is already usable without it, because consecutive monthly rows show both values.

R5: Top 3 Reps by Commission (This Month)

1. **New Report → Orders.**
2. **Columns:** Order Number, Sales Representative, Order Date, Commission Amount.
3. **Group Rows: Sales Representative.**
4. Summarize **Sum** on Commission Amount.
5. **Filters:** Date Field **Order Date**, Range **Current Month**; **Status equals Paid**.
6. Try ▼ on **Sum of Commission Amount → Sort Descending**. If it isn't offered, skip it, because the dashboard will sort.
7. Save as R5 Top 3 Reps by Commission - This Month.
8. **Edit → ▼ beside Save → Save As:** name R5b Top 3 Reps by Commission - Last Month, then set Range to **Previous Month**. **Save & Run**.

R6: Total GST Payable

1. **New Report → Orders.**
2. **Columns:** Order Number, Order Date, Total CGST, Total SGST, Total IGST, Total GST.
3. **Group Rows: Order Date → Calendar Month.**
4. Summarize **Sum** on all four tax columns.
5. **Filters:** Range **All Time**; **Status equals Confirmed, Paid**.
6. Save as R6 Total GST Payable.

R7: Top 10 Products by Net Sales Quantity

1. **New Report**, type **Blush Orders with Lines**, **Start Report.**
2. **Columns:** Product Label, Quantity (the Order Product one), Order Number, Order Date.
3. **Group Rows: Product Label.**
4. Summarize **Sum** on Quantity.
5. **Filters:** Range **All Time**; **Status equals Confirmed, Paid**. This is the order's status, so Draft and Cancelled are excluded, and returns aren't deducted.
6. Try sorting groups with ▼ on Sum of Quantity → **Sort Descending**. If it isn't offered, skip.
7. Save as R7 Top 10 Products by Net Sales Quantity.

R8: Campaigns Active This Month

1. **New Report**, type **Campaigns**, **Start Report.**
2. **Columns:** Campaign Name, Type, Status, Start Date, End Date, Active, Budgeted Cost, Campaign Owner.
3. **Filters:** Date range **All Time**; **Add Filter: Active This Month equals True**.
4. Save as R8 Campaigns Active This Month.
5. **Edit → Save As:** R8b Campaigns Active This Month by Status. **Group Rows: Status. Save & Run**.

Step 9.8: Verify the reports

Report	What to check
R1	Months as top groups, reps inside each. **Record Count** total is **23** (Paid orders only). No Draft, Cancelled or Confirmed orders
R2	Two or three fiscal quarters (for example "FY2027 Q2 / Q3" if today is in Nov 2026), each split into Retail and Wholesale. Gross Profit = Effective − Cost. **Record Count** total is **26** (Confirmed + Paid)
R3	**26** orders, grouped by month
R4	Both channels with monthly rows and the Previous Month Total column (or consecutive months if you skipped the formula)
R5	Only this month's Paid orders, grouped by rep, with each rep's commission total
R5b	The same for last month
R6	Total CGST and Total SGST are about equal. Total IGST is above 0 (the Gujarat orders). Total GST = CGST + SGST + IGST

Report	What to check
R7	One group per product (up to 11, since Scarf is retail-only), “13#014 - Earrings” and “14#004 - Earrings” are separate, and Sum of Quantity is shown for each
R8	Exactly **3** campaigns (Diwali Sale, Festive Webinar, Ongoing Social Ads)
R8b	The same 3, grouped by Status (In Progress 2, Planned 1)

Step 9.9: Make channel copies for the dashboards

To copy a report: open it → **Edit** → ▼ beside **Save** → **Save As** → type the new name → make sure the folder is **Blush Reports** → **Save** → **Filters** tab → **Add Filter**: **Record Type equals (Retail or Wholesale)** → **Save & Run**.

Make all 8 copies:

Copy from	New name	Filter to add
R3	Retail - Monthly Order Amount	Record Type equals **Retail**
R5	Retail - Commission by Rep This Month	Record Type equals **Retail**
R7	Retail - Top 10 Products	Record Type equals **Retail**
R6	Retail - GST Payable by Month	Record Type equals **Retail**
R3	Wholesale - Monthly Order Amount	Record Type equals **Wholesale**
R5	Wholesale - Commission by Rep This Month	Record Type equals **Wholesale**
R7	Wholesale - Top 10 Products	Record Type equals **Wholesale**
R6	Wholesale - GST Payable by Month	Record Type equals **Wholesale**

Each copy must start from the original report, not from a copy. The two filters (Status and Record Type) will then both appear on the copy. In the R7 copies, the filter field is also called **Record Type**.

Step 9.10: Build the dashboards

How a dashboard is built

1. **App Launcher → Dashboards → New Dashboard.** Enter a **Name**, and choose **Folder → Blush Dashboards**. Click **Create**.
2. The builder opens. Click **+ Widget** (older releases: **+ Component**). In the search box, type the report name, click it, and click **Select**.
3. The widget appears. Click its **pencil (edit)** icon and set:
    - **Display As:** the chart type I specify (click the matching icon)

- **Title:** as I specify
- **Sort Rows By / Max Groups Displayed** (the wording varies by release; look for the settings that limit how many bars show), where I specify

4. Click **Add** (or **Update**) to apply the widget.
5. Repeat for each widget, then click **Save** and **Done**. Click **Refresh** to load the data.
6. Leave **View Dashboard As** at its default of yourself, so everyone sees the same numbers.

Dashboard 1: Retail Dashboard

Widget report	Display As	Title	Extra settings
Retail - Monthly Order Amount	Vertical Bar Chart	Retail: Order Amount by Month	X-axis Order Date; value Sum of Total Payable
Retail - Commission by Rep This Month	Horizontal Bar Chart	Retail: Top 3 Reps by Commission (This Month)	Sort by value, largest first; **max 3 groups**
Retail - Top 10 Products	Horizontal Bar Chart	Retail: Top 10 Products by Quantity	Sort by value, largest first; **max 10 groups**
Retail - GST Payable by Month	Vertical Bar Chart	Retail: GST Payable by Month	Value: Sum of Total GST

Dashboard 2: Wholesale Dashboard

Create it as a new dashboard named Wholesale Dashboard, with the same four widgets using the four **Wholesale** reports and titles starting with **Wholesale:**.

Dashboard 3: Marketing Dashboard

Widget report	Display As	Title	Extra settings
R8 Campaigns Active This Month	Table	Campaigns Active This Month	Show Campaign Name, Type, Status, Start Date, End Date
R8b Campaigns Active This Month by Status	Donut Chart	Active Campaigns by Status	Value: Record Count
R8b Campaigns Active This Month by Status	Metric	Campaigns Running This Month	Value: Record Count

If a chart looks empty, click **Refresh**. If it's still empty, open its source report and check that it shows data.

Step 9.11: Final checks

#	Check	Expected
1	Open **Retail Dashboard**	Four widgets with data. Order Amount shows several months
2	Top 3 widget	Exactly 3 bars, largest first
3	Top 10 widget	At most 10 bars
4	**Wholesale Dashboard**	Four widgets with data. No product “99#001 - Scarf” (it’s retail-only)
5	**Marketing Dashboard**	The table shows 3 campaigns, the donut shows 2 In Progress and 1 Planned, and the metric shows **3**
6	Cross-check	Add up the Retail and Wholesale monthly amounts for one month. The total matches that month in R3
7	Sharing	**Reports → All Folders:** Blush Reports and Blush Dashboards both show Viewer access for All Internal Users

Don’t delete the demo data. It’s what you’ll present. I’ll give a cleanup script at the very end if you want one.

Phase 9 checkpoint

- 3 demo users created (or the fallback accepted)
- Product Label field created; Blush Orders with Lines report type deployed
- Orders script ran: Paid 23, Confirmed 3, Draft 3, Cancelled 3; exercise numbers match
- 3 active campaigns
- 10 reports (R1–R8, R5b, R8b) and 8 channel copies saved in **Blush Reports**
- 3 dashboards saved in **Blush Dashboards**, all widgets showing data
- Both folders shared with All Internal Users as Viewer

Tell me:

1. whether the R4 PREVGROUPVAL formula worked (and the exact error if it didn’t),
2. any report whose numbers don’t match the table in 9.8,
3. whether “Sort Descending”, “Max Groups” or other settings had different names in your org.

Reply **next** for **Phase 10: users, permission sets, the Blush app, the full approval test, and the final test plan**.

Done.Next Phase.

I’ll check a few platform details before writing this phase, so the steps match what you’ll see.

Phase 10: Users, permission sets, the Blush app and final testing

This is the last phase. You'll set up access for the Sales and Marketing groups, build the Blush app, then run the full approval, Paid-lock and invoice tests as real users.

Licence plan. You have one spare full Salesforce licence, so you'll test with one extra user at a time:

1. Create the Sales user and run all Sales tests.
2. Deactivate that user (which frees the licence).
3. Create the Marketing user and run the Marketing tests.

Design recap: both groups share one thin base profile, and all object access comes from permission sets.

Step 10.1: Check licences

Setup → Company Information. Confirm:

- **User Licenses → Salesforce:** 1 remaining
- **Feature Licenses → Marketing User:** 1 remaining (you used one in Phase 2)

If either is 0, tell me before continuing.

Step 10.2: Create the base profile "Blush Employee"

1. **Setup → Profiles.** Click **Minimum Access - Salesforce** to open it.
2. Click **Clone**. **Profile Name:** Blush Employee. **Save**.
    - If **Minimum Access - Salesforce** doesn't exist in your org, clone **Standard User** instead and tell me.

Record types and page layouts for the profile

This makes Sales see the right Retail or Wholesale layout. Repeat the sub-steps for **Accounts**, **Opportunities** and **Orders**.

1. On the Blush Employee profile page, click **Object Settings**, then click the object's name (for example **Accounts**), then **Edit**.
2. Find **Record Types and Page Layout Settings**. Set:

Object	Retail row: layout	Wholesale row: layout
Accounts	Retail Account Layout	Wholesale Account Layout
Opportunities	Retail Opportunity Layout	Wholesale Opportunity Layout
Orders	Retail Order Layout	Wholesale Order Layout

3. Tick **Assigned** for both **Retail** and **Wholesale**. Choose **Retail** as the **Default**.

4. Leave every object permission box as it is. The permission sets add those.
5. **Save**.

If the screen has no per-record-type layout dropdowns, go to **Object Manager → [object] → Page Layouts → Page Layout Assignment → Edit Assignment** instead. Select the **Blush Employee** row, then set each record type's layout from the **Page Layout To Use** dropdown. Tell me if you end up there.

Step 10.3: Create the Blush Lightning app

1. **Setup → App Manager → New Lightning App.**
2. **App Details and Branding: App Name** Blush, **Developer Name** Blush, **Description** Blush Retail & Wholesale Management. **Next**.
3. **App Options:** keep **Standard navigation**. **Next**.
4. **Utility Items: Next** (skip).
5. **Navigation Items:** move these from Available to Selected, in this order: **Home, Leads, Accounts, Contacts, Opportunities, Orders, Products, Price Books, Stores, Campaigns, Reports, Dashboards**. **Next**.
6. **User Profiles:** move **System Administrator** and **Blush Employee** to Selected. **Save & Finish**.

Step 10.4: Make Blush the default app

For employees

1. **Setup → Profiles → Blush Employee → Assigned Apps** (under Apps) **→ Edit.**
2. Tick **Visible** for **Blush**, and select **Default** on its row. **Save.**

For yourself and as a fallback

1. Do the same on **System Administrator → Assigned Apps → Edit** (tick **Visible** and **Default** for Blush). If Salesforce won't let you edit that standard profile, skip this part.
2. **Setup → App Menu.** Drag **Blush** to the top of the list. **Save.**

Then click the **nine dots** (App Launcher). Blush should be the first app shown.

Step 10.5: Permission set "Blush Sales"

Create it

1. **Setup → Permission Sets → New.**
2. **Label:** Blush Sales, **API Name:** Blush_Sales, **License:** leave as **--None--**. **Save.**

Object settings

For each row: click **Object Settings** → click the object → **Edit**. Under **Tab Settings**, choose **Available and Visible** where a tab is listed. Tick the object permissions shown. **Save**. Then go back to the Object Settings list for the next one.

Object	Tab	Object permissions
Leads	Available and Visible	Read, Create, Edit
Accounts	Available and Visible	Read, Create, Edit
Contacts	Available and Visible	Read, Create, Edit
Opportunities	Available and Visible	Read, Create, Edit
Orders	Available and Visible	Read, Create, Edit
Order Products	(none)	Read, Create, Edit, **Delete**
Products	Available and Visible	Read
Price Books	Available and Visible	Read
Stores	Available and Visible	Read

Don't tick Delete on Orders. Sales can't delete orders. Order Products need Delete so lines can be removed from Draft orders.

System permissions

System Permissions → Edit. Tick:

- **Activate Orders** (needed to set an order to Paid)
- **Convert Leads** (the Opportunity trigger converts leads as the person who creates the Opportunity)
- **Run Flows**
- **Run Reports**
- **Edit Tasks**
- **Edit Events**

Do **not** tick **Edit Activated Orders**. That is what locks Paid orders for Sales. **Save.**

Apex and Visualforce access

- **Apex Class Access → Edit:** add InvoiceController. **Save.**
- **Visualforce Page Access → Edit:** add InvoicePDF. **Save.**

Step 10.6: Permission set "Blush Marketing"

1. **Permission Sets → New. Label:** Blush Marketing, **API Name:** Blush_Marketing, **License:** --None--. **Save.**
2. Object Settings, as in 10.5:

Object	Tab	Object permissions
Campaigns	Available and Visible	Read, Create, Edit, Delete
Leads	Available and Visible	Read
Contacts	Available and Visible	Read

3. **System Permissions → Edit:** tick **Run Reports**. **Save.**

Marketing can't create orders or opportunities, and has no Convert Leads or Activate Orders. It also needs the **Marketing User** checkbox on the user record, which you'll set in Step 10.12.

Step 10.7: Allow Login As

Setup → Login Access Policies. Tick **Administrators Can Log in as Any User** if it isn't ticked. **Save.**

Step 10.8: Create the Sales user

1. **Setup → Users → Users → New User.**
2. Enter:
    - **First Name:** Sam, **Last Name:** Seller, **Alias:** sseller
    - **Email:** your own email
    - **Username:** unique, for example sam.seller.yourname@blush.example
    - **User License:** Salesforce
    - **Profile:** Blush Employee
    - **Manager:** your admin user (search and select yourself)
    - **Time Zone:** (GMT+05:30) India Standard Time, **Locale:** English (India), **Language:** English
    - Untick **Generate new password and notify user immediately**
    - Leave **Marketing User** unticked
3. **Save.**
4. Click **Permission Set Assignments → Edit Assignments**. Move **Blush Sales** to Enabled. **Save.**

Step 10.9: Test as the Sales user

Open Setup → Users → click **Sam Seller → Login** (it opens a new session as Sam). To return to yourself, click **Sam's name → Log out as Sam Seller**.

A. Access checks (as Sam)

#	Check	Expected
1	Landing page	Opens in the **Blush** app
2	Navigation bar	Has Leads, Accounts, Contacts, Opportunities, Orders, Products, Price Books, Stores, Reports, Dashboards. **No Campaigns**
3	Open the **Jeans** product	No **Edit** button, so it's read-only
4	Opportunities → New	Only **Retail** and **Wholesale** are offered
5	Open any Draft order	No **Delete** button
6	Dashboards	The Retail Dashboard opens with data

If a field or tab is missing, fix it with the troubleshooting list at the end.

B. Full order cycle (as Sam)

1. **Opportunities → New → Retail: Opportunity Name** Approval Test, **Customer Name** Approval Test Customer, **Customer Email** approval@example.com, **Customer Phone** 9000011111, **Close Date** any, **Stage** Prospecting. **Save.**
    - Expected: an Account Approval Test Customer (Retail) and a Contact exist, and the price book is **Retail Price Book**.
2. **Related → Products → Add Products: Jeans**, qty 2. Edit the line and set **Discount** 12.5.
3. Click **Create Order.** Choose **Store** Blush - Pune, **Payment Mode** UPI, **Billing State** Maharashtra. **Next.**
4. Open the new Order. Expected:

Field	Expected
Max Discount %	12.5
Needs Approval	checked
Sales Representative	Sam Seller
Status	Draft

5. Change **Status** to **Confirmed.** Expected: the *discount approval* error.
6. Click **Submit for Approval.** Expected: it submits. Then try to edit the order or its discount. Expected: the record is locked.

7. **Switch back to yourself** (log out as Sam). Open the order → **Approval History** → click **Approve** (or the **Approve/Reject** button). Expected: **Approved Max Discount %** = 12.5 and **Needs Approval** is now unchecked.
8. **Log in as Sam again.** Set **Status = Confirmed.** Expected: it saves. Click **Generate Invoice.** Expected: the PDF has no DRAFT banner and shows CGST/SGST.
9. Set **Status = Paid.** Expected: it saves, and **Commission Amount** is filled.

C. Paid-lock checks (as Sam, on the Paid order)

#	Try	Expected
1	Edit **Billing Street**	Blocked
2	**Add Products**	Blocked
3	Delete a line, or delete the order	Blocked
4	Change **Status** back to **Draft**	Blocked

If any of these succeed, tell me right away. I'll add a validation-rule backup.

D. Admin override (as yourself)

Open the same Paid order. You can still edit it (for example **Payment Mode**), because the admin has **Edit Activated Orders**. If you can't, add that permission through the Phase 4 permission set Blush Admin Order Controls.

Step 10.10: Switch the licence

1. Setup → Users → **Sam Seller → Edit.** Untick **Active. Save.** Confirm the deactivation.
2. **Setup → Company Information** should now show Salesforce licences 1 remaining again.

Step 10.11: Create the Marketing user

1. **Users → New User.**
2. **First Name:** Maya, **Last Name:** Marketer, **Alias:** mmarket, a unique **Username**, your **Email**, **User License:** Salesforce, **Profile:** Blush Employee, same locale and time zone as before.
3. Tick **Marketing User.** Untick the password-notify box. **Save.**
4. **Permission Set Assignments → Edit Assignments →** enable **Blush Marketing. Save.**

Step 10.12: Test as the Marketing user

Open **Maya Marketer → Login.**

#	Check	Expected
1	Landing page	Blush app
2	Navigation bar	Campaigns, Leads, Contacts, Reports, Dashboards. **No Orders, Opportunities or Products**
3	Campaigns → New	Name MKT Test Campaign, **Start Date** today, **Status** In Progress, **Active** ticked. **Save.**
4	Campaigns list view Campaigns Active This Month	Shows the new campaign (plus the three DEMO ones)
5	**Marketing Dashboard**	Opens with data
6	Leads	Can view, but there is no **Edit** or **New** button
7	Try to open an Order URL or the Orders tab	Not accessible

Delete MKT Test Campaign if you don't want it as a demo record. Then log out as Maya.

Step 10.13: Leave the system ready for demonstration

You can only have one extra user active at a time. For your presentation, reactivate **Sam Seller** (**Setup → Users → Sam → Edit → tick Active → Save**) after deactivating Maya. Keep screenshots of the Marketing test as evidence.

Troubleshooting

Symptom	Fix
A field is missing or read-only for Sam	Edit **Blush Sales → Object Settings → [object] → Edit**, then in **Field Permissions** tick Read (and Edit for input fields), **Save**
"Insufficient access" in the Create Order flow	Check Sam has Read on **Stores**, Create/Edit on **Orders**, and Create on **Order Products**, plus Edit on the Opportunity field **Order Created**
Sam can't see Retail/Wholesale layouts	Revisit Step 10.2's page-layout assignments
Generate Invoice fails for Sam	Check the Apex class and Visualforce page access in Step 10.5
Submit for Approval says no manager	Open Sam's user record and set **Manager**
Marketing user can't save a campaign	Open Maya's user record and confirm **Marketing User** is ticked

---

Step 10.14: Final project checks

Run all Apex tests: **Developer Console → Test → Run All.** Expect all to pass:

- 13 tests for products
- 18 tests for opportunities
- 3 tests for invoices

FollowUpReminderBatch has no test class (you asked to skip it), so overall coverage will be below 100%. If your mentor expects 100%, ask me to add a batch test.

Prepare your submission

The assignment lists these deliverables:

Deliverable	**Where to find it**
Solution design	My Phase 1 approach summary plus the data model tables from Phases 2–4
Configured setup	Everything you built
Sample records	DEMO accounts, orders, campaigns and the two Store records
Reports and dashboards	**Blush Reports** and **Blush Dashboards** folders
Invoice PDF example	The two PDFs you saved in Phase 8
Test evidence	Screenshots from Steps 10.9 and 10.12, Apex test results, report checks from Phase 9
Assumptions and limitations	My Phase 1 assumptions plus the list below
Walkthrough	Demo order: Lead → Opportunity → Create Order → Approval → Paid → Invoice → Dashboards

Known limitations to state in your document

- No inventory, returns or exchanges (outside Phase 1 scope).
- Invoice numbers come from an auto-number on Order, so cancelled or draft orders can leave gaps.
- Calculated Order Product fields are read-only on the layout only. They could still be edited through imports or the API.
- Only 2 full licences exist in a Developer Edition org, so Sales and Marketing were tested one at a time and the three demo reps are Platform users.
- GST rates follow the assignment (5%/12% around ₹1,000). Real current rates differ, and the rates are in the Blush Setting record.
- The nightly reminder job has no Apex test class.

Phase 10 checkpoint

- Blush Employee profile, Blush app (default) created
- Permission sets Blush Sales and Blush Marketing created
- Sales tests A–D passed, including the approval cycle and Paid lock
- Marketing tests passed
- All Apex tests pass
- Evidence saved

Tell me which Sales Paid-lock checks (C1–C4) passed or failed, and anything that behaved differently, and I'll help close any gaps. Once those are confirmed, your Blush project is complete.
